## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2 and 45 are rejected under 35 U.S.C. 102(e) as being anticipated by 2003-46352 (Fig. 3).

Regarding claim 1, 2003-46352 (Fig. 3) discloses an amplifier circuit comprising an amplifying transistor (N31, N32) which amplifies an input signal (Vin+, Vin-), and a current path control section (N35) which controls a size of the amplifying transistor (N31, N32) and a path (a node between the drain of transistor N35 and sources of transistors N31 and N32) of a current through the amplifying transistor (N31, N32).

Regarding claim 2, wherein the current path control section (N35) includes a current control transistor which controls a current flow through the amplifying transistor (N31, N32), and a plurality of unit circuits (first unit circuit: N31, N32, N35; second unit circuit: N33, N34, N36).

Regarding claim 45, the current path control section (N35) which varies a size of the amplifying transistor (N31, N32) and controls and maintains a current flow through the amplifying transistor (N31, N32) at a constant level (see abstract).
